EXPERIENCE

AI Engineer · Esperscare LLC

San Jose, CA | Jul 2023 – Present

- Serve as the primary technical owner and client-facing AI lead for a payment integrity team at a health insurance client, partnering directly with the client's CTO to identify automation opportunities, scope new AI initiatives, and align technical roadmaps with business priorities.
- Architected and own end-to-end a router-orchestrated multi-agent system serving four cross-functional operations teams from a single platform; designed intent-classification routing to five specialized sub-agents (FAQ, exclusions, outreach, letter templates, appeals), achieving **96%** task success rate and **98%** out-of-scope rejection rate at 2–3K queries/day.
- Own and operate a revenue-code assignment service built on grounded retrieval over a **1.8M**-document corpus; the system handles **~14K** line items per day across multiple claims, replacing **~8 hours** of daily manual coding and achieving **98%** automation, with low-confidence cases automatically escalated to human review.
- Designed and own a structured data-extraction pipeline for UB-04, HCFA-1500, and itemized bill documents, previously a fully manual claims-assistant workflow; auto-extracts **96%** of records at high confidence, with residual cases routed to review; drove a **27%** accuracy lift through targeted domain-specific fine-tuning.
- Built and maintain a continuous evaluation harness on Vertex AI covering pairwise preference scoring, human feedback loops, and regression gating across all agents and pipelines; established an LLM-as-judge framework for automated output QA, enabling confident, gated rollouts and preventing quality regressions at scale.
- Collaborate cross-functionally with claims, operations, and engineering teams to gather workflow requirements, translate business logic into agent behaviors, and ensure consistent adoption and feedback loops across teams.

Software Engineer · RedBlackTree Tech

India | Jan 2019 – May 2020

- Owned and shipped an OCR + CNN classification pipeline to extract provisions from lease documents, reducing processing time by **82%** at **0.92** AUC.
- Designed and owned an async processing system on RabbitMQ and Celery to distribute model inference across workers and control concurrency under production load.

PATENTS & CERTIFICATIONS

US Patent 12,597,074 B1 Anomaly Detection in Insurance Claim Payments, knowledge-graph system for automated payment integrity.

Claude Code in Action Anthropic Education · May 2026 · [verify](#)

PERSONAL PROJECTS

Output Observatory · Interactive LLM Evaluation Learning Platform

- Designed and built an interactive learning platform for LLM evaluation covering RAG evaluation, agent evaluation, fine-tuned model testing, and production monitoring across 6 tracks and 24 hands-on lessons targeting ML engineers and practitioners.
- Integrated industry-standard evaluation frameworks (RAGAS, DeepEval, LangSmith, Guardrails AI, Promptfoo) to surface real metrics including faithfulness, context precision, hallucination detection, and trajectory efficiency, giving learners hands-on exposure to production eval workflows.

TECHNICAL SKILLS

AI Systems: Multi-agent orchestration, RAG / grounded retrieval, function & tool calling, LLM evaluation (pairwise preference, LLM-as-judge, human feedback), prompt & system design, model fine-tuning

Developer Tools: Claude Code, MCP (Model Context Protocol), Claude Skills, GitHub Copilot

ML & Modeling: Deep learning, NLP, reinforcement learning, computer vision

Infrastructure & MLOps: GCP (Vertex AI, Cloud Run), AWS, Docker, Kubernetes, RabbitMQ, Celery, async job systems, model monitoring

Frameworks & Libraries: PyTorch, TensorFlow, Transformers, LangChain, LlamaIndex, Scikit-learn, OpenCV

Languages: Python, SQL, Java, C++, JavaScript, Shell

EDUCATION

San Jose State University · M.S., Artificial Intelligence · San Jose, CA

Aug 2021 – May 2023

Anna University · Integrated M.Sc., Software Systems · India

Aug 2014 – May 2019
